

Architect and PhD candidate in Architecture at the Department of Architecture (DIARC) of the 'Federico II' University of Naples (Italy). She conducts research activity mainly in the field of environmental design and of sustainable technologies for architecture and for the environment. In particular, her research focuses on the study of climate change impacts on urban coastal settlements and on actions for climate mitigation and adaptation. She is interested in port cities as laboratory test for risk analysis and development of climate mitigation and adaptation actions.
